

Asphalt Restorer

Repairs holes and cavities

General

Asphalt Restorer is tested cold bitumen with high durability. The Asphalt Restorer is used on all asphalt roads where bitumen is used as binding agent. The product is easy to use and apply. With the Asphalt Restorer in 20 kg pails you can fix small damages before they grow big.

Range of application

The product repairs holes and cavities in the asphalt, fills up at wells and levels edges.

Instructions for use

We recommend storing the product in room temperature 24 h before usage. Start by cleaning and smoothening the surface with sand or gravel. Flip the bucket and let the mass fall out. The process can be accelerated with the shovel in the bucket. Spread the mass with a shovel. If the mass gets sticky, sprinkle some sand before you smooth out with the back of the shovel. If necessary, run over the surface with a car a few times. Leftover pulp can be brought back into the bucket. However, it should be used within shortly. Unopened packs can be stored for at least 1 year. Always keep safety gloves when you work with the product. Asphalt restorer can be washed off with soap and water.

Package

11700218 / 20-lit burk
